

- 1 Open the file and extract it to your chosen folder.

- 2 Open the "AutoToolGUI.exe" and run the application.

- 3 This will appear in your screen. Click "TEST" and do not touch the screen while testing.

- 4 If the picture below is seen and shows "PASS", it means that the touch screen is working well. But if you see red dots on the screen rather than green, you need to check the touch film.

- 5 Open the TV casing and locate the touch films. Fully insert the touch films on the board and repeat the process again until testing is PASS.
